-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Allowable Subject Matter

The indicated allowability of the claims is withdrawn in view of the following newly discovered grounds of rejection.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 144-159 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bryan (5,947,965) in view of Wagner (6,416,515; Applicant's own prior patent).

Bryan clearly discloses the claimed invention except for the tapered interface comprising a female threaded portion. However, Wagner discloses that providing a tapered connection locked together via a female threaded portion, allows the fixation device to be loosely connected for initial placement and adjustment and rigidly and securely tightened in a final position. (see, e.g., Fig. 11 and col. 7, line 50 - col. 8, line 46). It would have been obvious to a person having ordinary skill in the art at the time of the invention to have provided the fixation system of Bryan with a tapered interface comprising a female threaded portion, in view of Wagner, in order to allow the fixation device to be loosely connected for initial placement and adjustment and rigidly and

securely tightened in a final position. Regarding the location and size of the features of the device, it would have been obvious to determine the same, e.g., to address the needs of different patients, since it has been held that mere relocation of features of an invention involves only routine skill in the art. *In re Japikse*, 86 USPQ 70. Moreover, a change in size is generally recognized as being within the level of ordinary skill in the art. *In re Rose*, 105 USPQ 237 (CCPA 1955).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
